

# “HOW MUCH 'CONTAMINATION' IS TOO MUCH?”

The university's waste is a little different from what you'd see at home. While you should still try to keep your recyclables clean to minimize odors and messes, typical leftover food and liquid waste is not enough to contaminate a university recycling bin. Pour your excess liquid out and wipe away solid waste with a napkin before recycling and you're set!

**POUR OUT LIQUIDS AND WIPE AWAY SOLIDS BEFORE RECYCLING.  
NO RINSING REQUIRED!**
